

IF YOU ARE HAVING A MEDICAL EMERGENCY, CALL 911 IMMEDIATELY

ARES 620 Device Usage Instructions:

- Thoroughly clean and dry your forehead.
- Adjust the pre-marked headband to your approximate head size. (It should be pre-adjusted if you picked up from the office by the staff, but if you need to readjust to make it tighter or looser; you can do so by the Velcro on both side of the headband.
- Remove the protective covers from the EEG electrode pads from the device (two – one on each end).
- Place the device on your forehead, a little above your eyebrow with the tip or the clear tube on top. The black headband should also be on top, you will pull the headband over the head and secure in place.
- The cannula tip (clear tube) goes into your nose, it measures your respiratory, and you can adjust the slip tube to tighten the cannula in place.
- The device should be on tight enough that it doesn't move or falls off when you sleep or move around, but not too tight that you can't sleep with it.
- After putting on the device, press the on/off button located next to the display on the front of the device to turn it on. A voice will come on, it will give you up to 30 seconds to put it on and adjust comfortably.
- The device will record around 6-7 hours of data and then it will turn off automatically by itself, but if the device is still on indicated by the light, press the on/off button to turn it off.
- If you need to get up in the middle of the night for water, restroom, or any other reasons, you keep the device on and stay turn on.
- Please refer to the user guide in the box, page 8-9 for pictures.
- **Instructions will be given on how to charge the device if it wasn't fully charged when it was hand out to the patient.*

Please return the machine on _____ before 10 AM (The building is open at 6 AM. You or someone else can drop by between 6 AM – 10 AM). There is a drop box outside next to our suite, please place the home sleep study box inside the drop box and any paperwork under the door.

Please give us a call if you have any questions or concerns at 609-490-1444, or you can send us an email.

Thank you!

Instructions for Home Sleep Studies

Description	Procedure Code
Home Apnea Study	95806

ON THE DAY OF YOUR STUDY:

- Do not eat or drink caffeine after 12:00 noon. The following foods and drinks contain high levels of caffeine
 - Coffee
 - Chocolate
 - Most tea, including iced tea, traditional black tea and green tea (which are often served in Asian restaurants)
- Please do not consume any alcoholic beverages or intoxicating substances on the day of your study. Patients under the effect of alcohol or non-prescription drugs will not be able to perform their study.
- Avoid naps all day
- Complete all forms and paperwork (they are emailed to you or can be found on our website at cmdsleep.com)

PLEASE BRING:

- Insurance cards, driver license (photo ID), and any other paperwork that has been sent to you.

AFTER YOU COMPLETED YOUR STUDY:

Please return your equipment ON-TIME. Our equipment is used EVERY NIGHT of the week. If it is not returned someone else's study will need to be cancelled. A late fee of \$100.00/night will be applied for overdue equipment (unless test falls on a Friday night the next day will be considered Monday).

The Home Sleep Study Procedure

Depending on the insurance most home studies is a three night study, unless your insurance doesn't covers for three nights.

You will pick up the equipment at the Sleep Center on the date of your study. The staff will carefully review the use of each piece of equipment. The entire process takes approximately 10 minutes, if you completed all the paperwork beforehand or 20-30 minutes if you did not complete the paperwork. Don't worry; none of the monitoring devices will be painful. The monitoring devices are very sturdy and easy to use. During the test, you should go to sleep at your normal time. However we need at least 7 hours of recording time, so plan accordingly. You may sleep in any position during the night. We do request that you sleep for some time on your back (unless you have a medical condition that would make it difficult to do so).

If you need to use the restroom during the night, drink water or for any other reason, keep the device on and stay turn on.

During the Home Apnea Study the following parameters will be monitored:

- **ECG** - (Electro-cardiograph or heart rate) to monitor your heart beat and rhythm
- **Respiration** - Your nose will be monitored by a thermocouple or pressure transducer, which looks like a small oxygen cannula.
- **Oximetry** - A probe that will read your oxygen saturation levels throughout the night.

If you have any questions during the study, please call the Lab number at 609-490-1444.

What do I do after the Sleep Study?

If you were seen at the CMD Sleep Disorders Center facility during the night:

Please wait for our office to contact you. After we have reviewed and finalized the test results you may be asked to schedule a follow-up appointment and review the results with the sleep doctor.

If you had a home sleep study:

Please phone us on the next business day at (609) 490-1444 to confirm successful recording and schedule appointment with one of our sleep specialists.

Appointments may be approximately 2-3 weeks from that test date.

If you were seen and/or referred by a non-CMD Sleep Disorders physician:

Most of physicians usually request that you wait for their office to call you for a follow-up appointment after they have received and reviewed the test results. This generally happens within a 2-3 week time period. If your Doctor's office hasn't contacted you within 2-3 weeks, please contact **our lab** to verify we have faxed your test results. If your Doctor's office has given you different instructions, please follow them.

Sleep Doctor:

- **Dr. Kevin Law & Dr. Palakkumar Patel** (609-586-7400) (Pulmonary, Sleep & Critical Care Medicine)
